

Daily Rainfall Monitoring

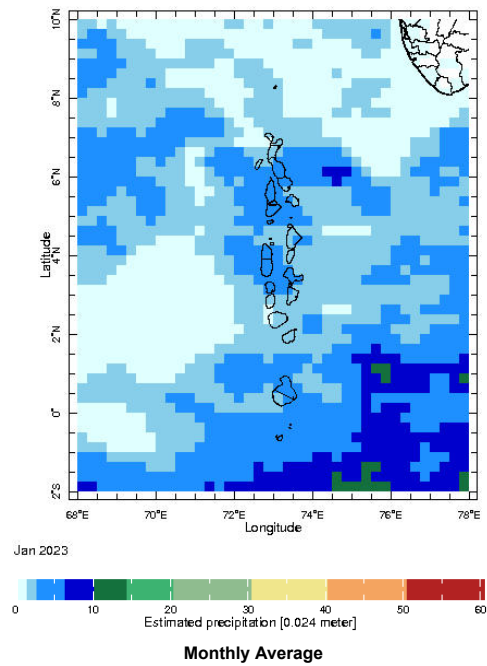

The following figures show the observed rainfall in the last 15 days in Maldives.

Monthly Rainfall Monitoring

The figure shows the average observed rainfall in the previous month.

Northern Maldives:

Rainfall in the current year (black) compared to rainfall in previous 5 years

Rainfall of past 365 days (black) compared to average rainfall since 2003.

Rainfall in the past 5 years with above-average rainfall hatched in blue and below-average hatched in brown

Central Maldives:

Rainfall in the current year (black) compared to rainfall in previous 5 years

Rainfall of past 365 days (black) compared to average rainfall since 2003.

Rainfall in the past 5 years with above-average rainfall hatched in blue and below-average hatched in brown

Southern Maldives:

Longitude 73.375E Latitude 0.375N
Rainfall in the current year (black) compared to rainfall in previous 5 years

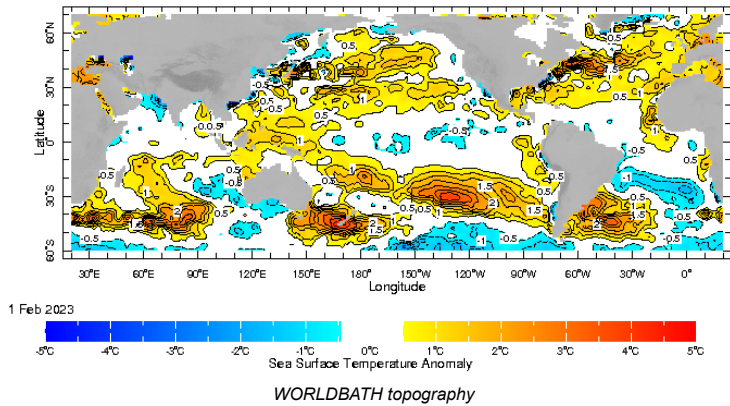

Longitude 72.7E Latitude 5N
Rainfall of past 365 days (black) compared to average rainfall since 2003.

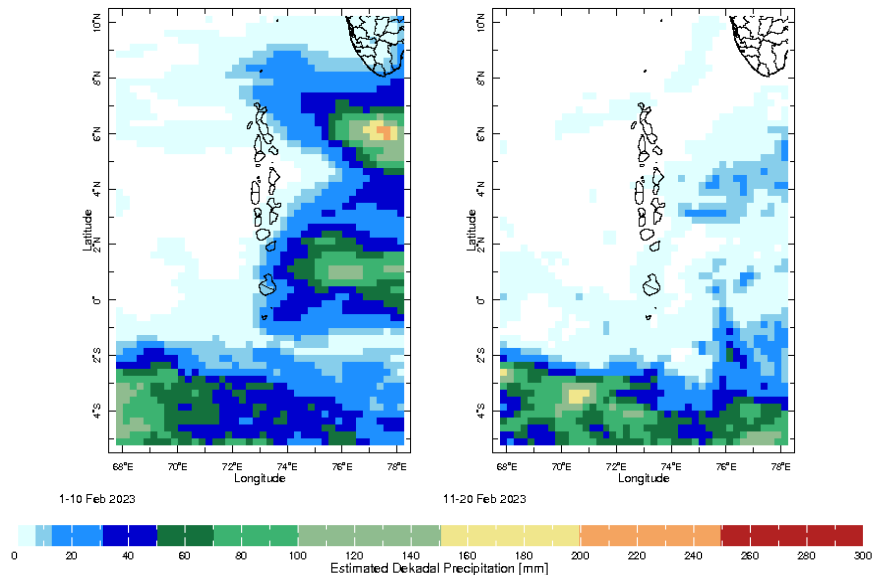

Rainfall in the past 5 years with above-average rainfall hatched in blue and below-average hatched in brown

Ocean Surface Monitoring

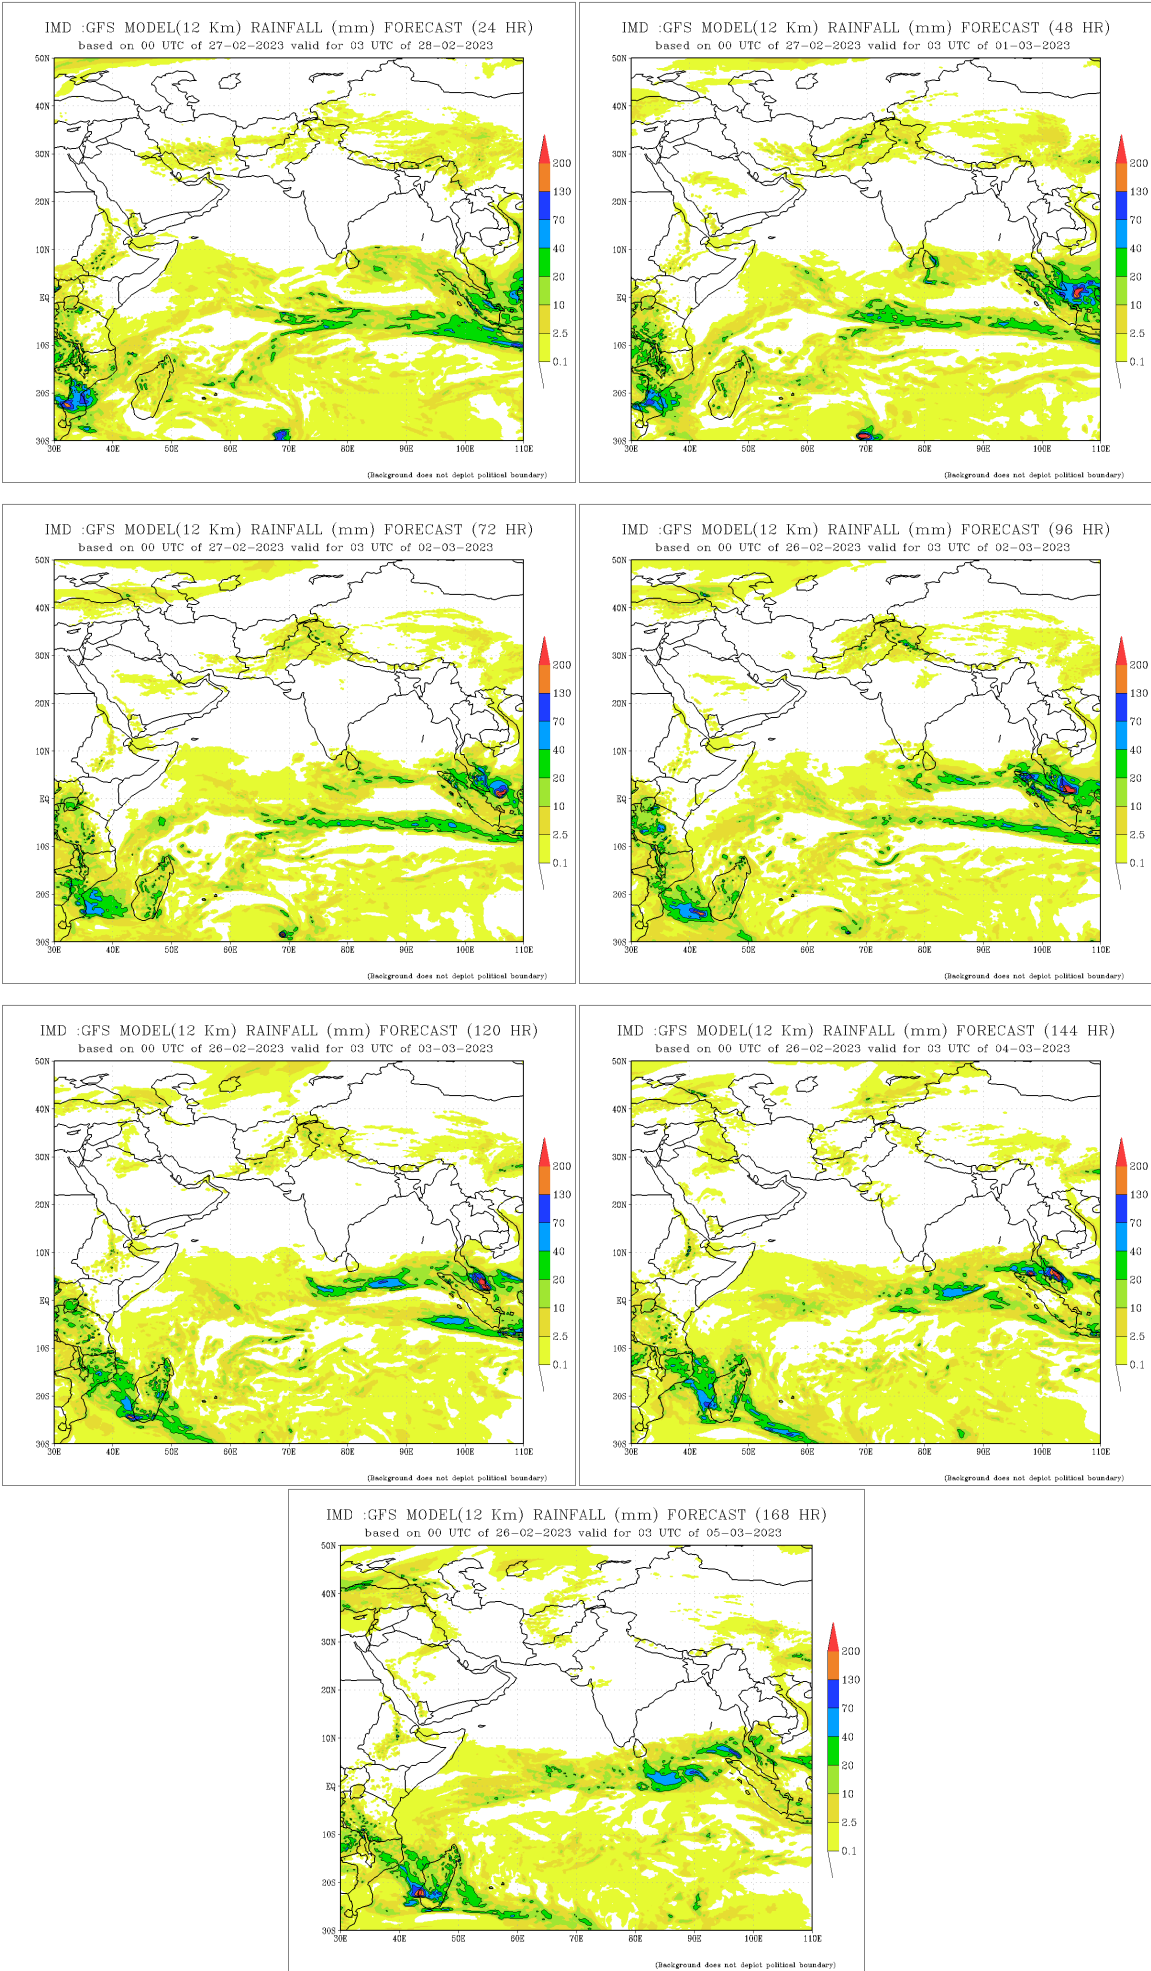

Dekadal (10 Day) Satellite Derived Rainfall Estimates

Daily Rainfall Forecast

Daily Rainfall forecasts (up to 7 days ahead) from the IMD is provided in figures below. These predictions are from the GFS (T1534) model covering the entire south Asian region.

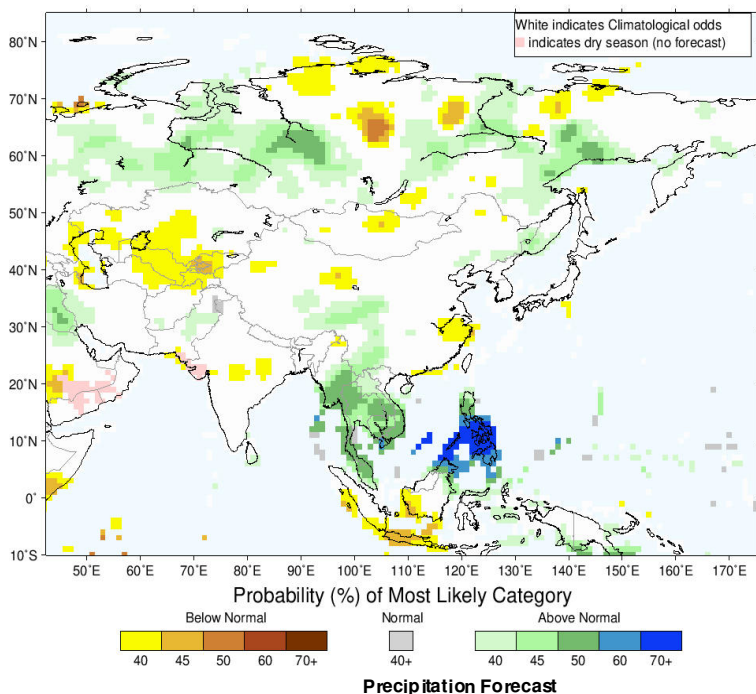

Bi-weekly Precipitation Forecast

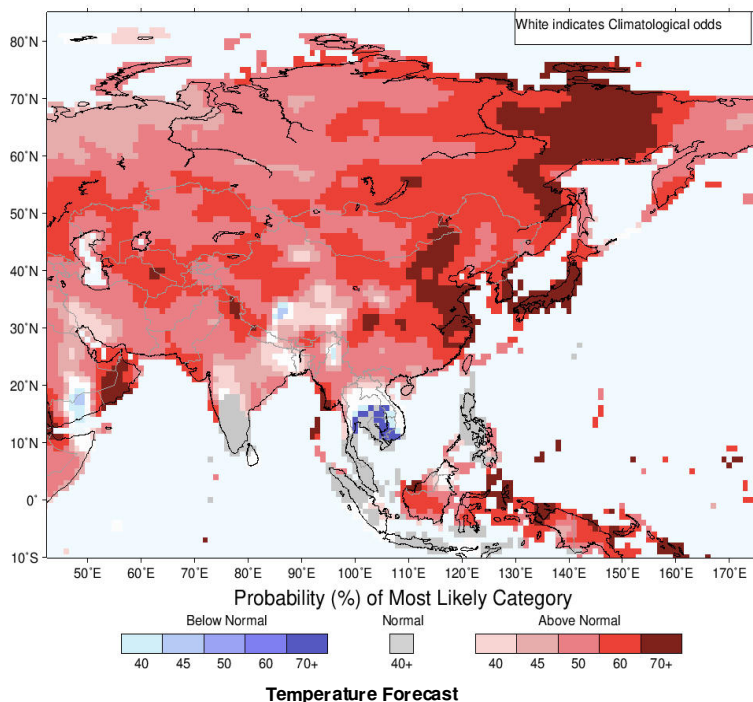

Seasonal Rainfall and Temperature Forecast

Following is the latest seasonal precipitation and temperature prediction for the next 3 months by the IRI. The color shading indicates the probability of the most dominant tercile -- that is, the tercile having the highest forecast probability. The color bar alongside the map defines these dominant tercile probability levels. The upper side of the color bar shows the colors used for increasingly strong probabilities when the dominant tercile is the above-normal tercile, while the lower side shows likewise for the below-normal tercile. The gray color indicates an enhanced probability for the near-normal tercile (nearly always limited to 40%).

IRI Multi-Model Probability Forecast for Precipitation for March–April–May 2023, Issued February 2023

IRI Multi-Model Probability Forecast for Temperature for March–April–May 2023, Issued February 2023
