

## Daily Rainfall Monitoring

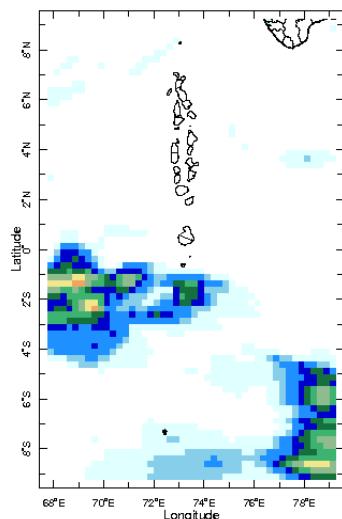

The following figures show the observed rainfall in the last 15 days in Maldives.

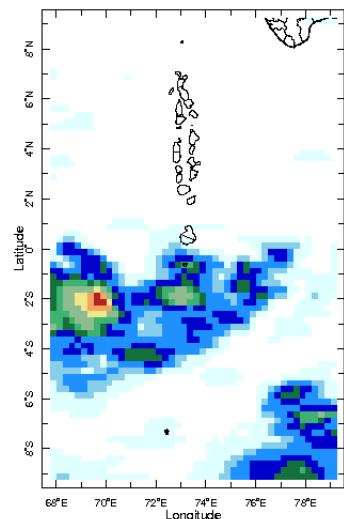

11 Aug 2020

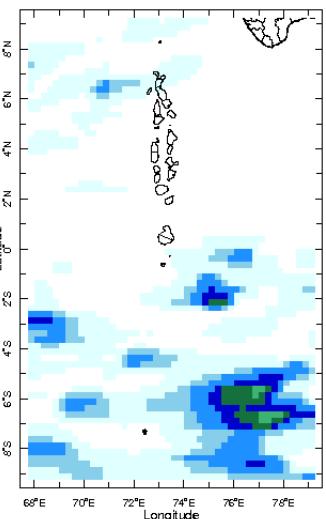

12 Aug 2020

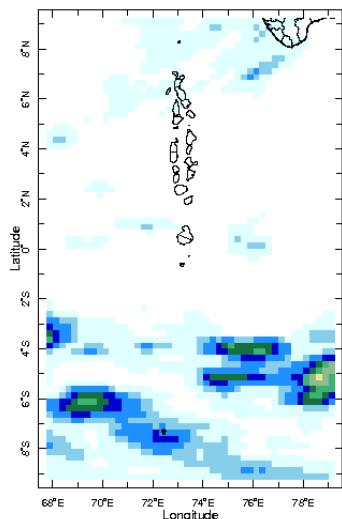

13 Aug 2020

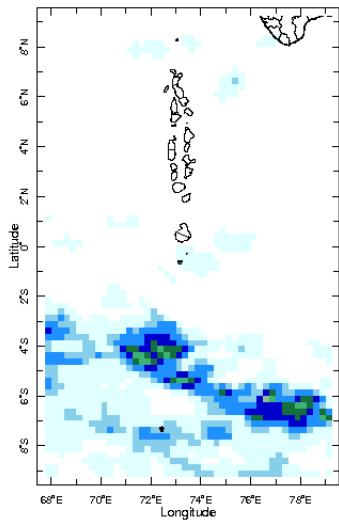

14 Aug 2020

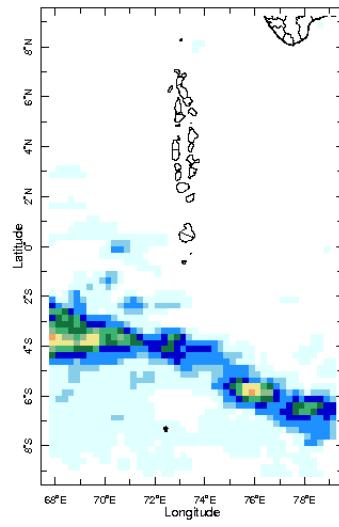

15 Aug 2020

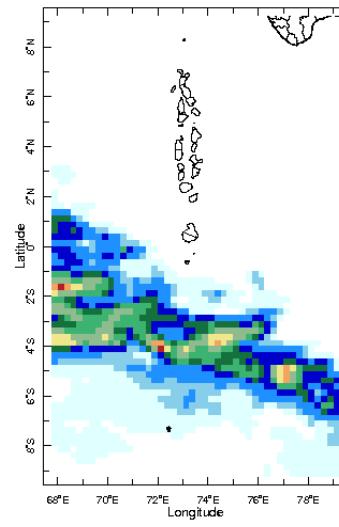

16 Aug 2020

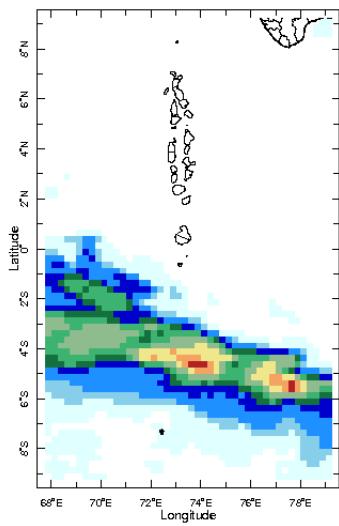

17 Aug 2020

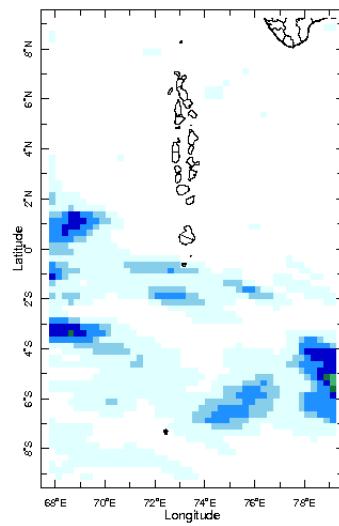

18 Aug 2020

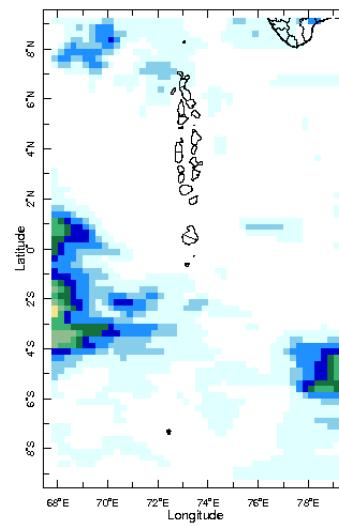

19 Aug 2020

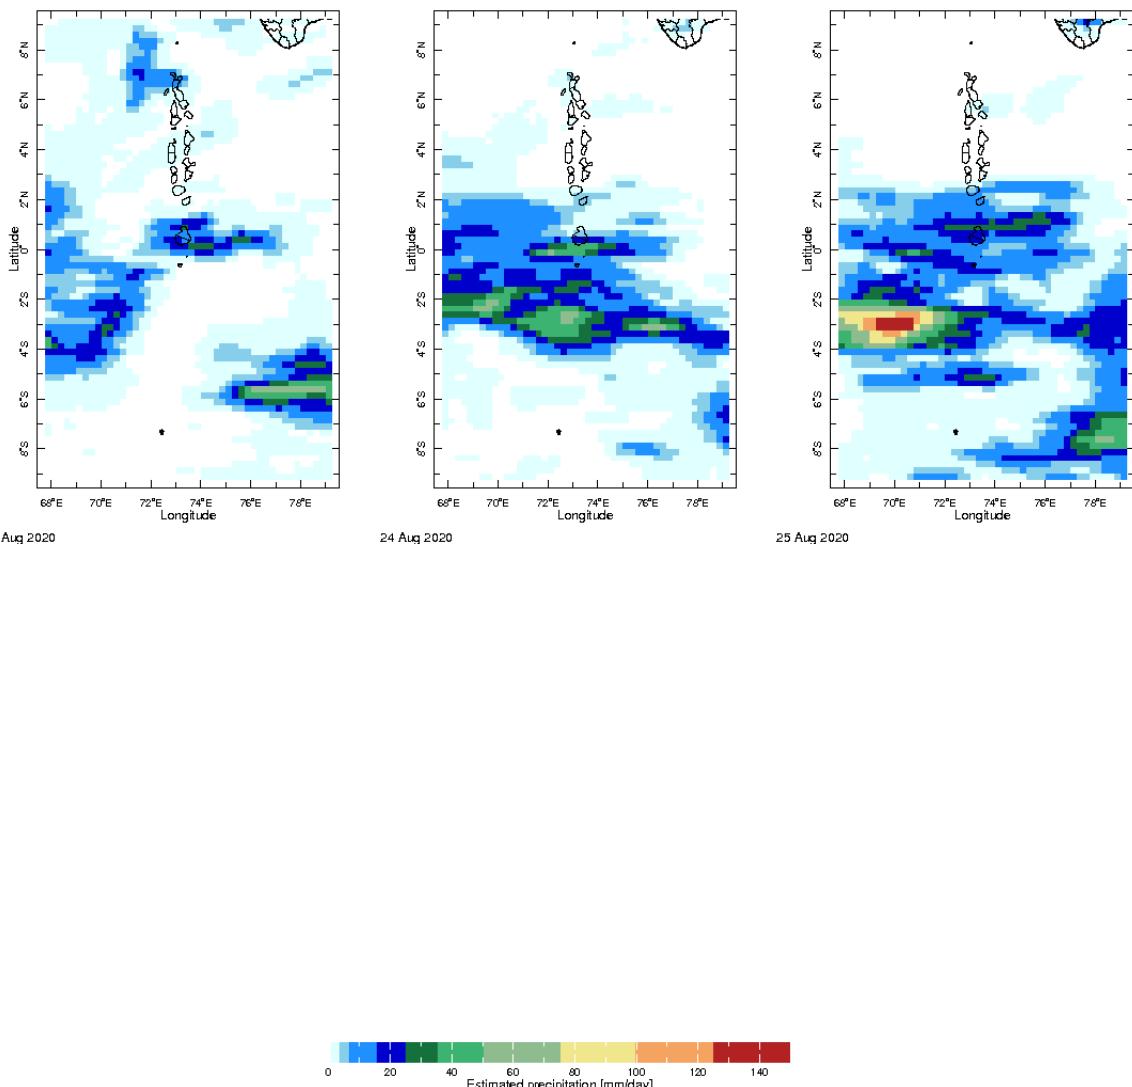

20 Aug 2020

21 Aug 2020

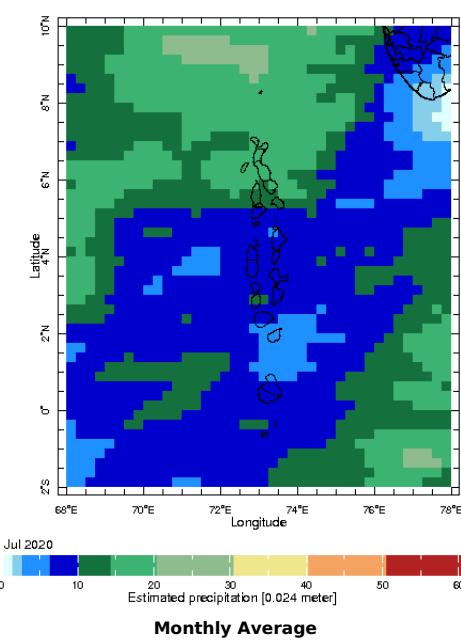

22 Aug 2020

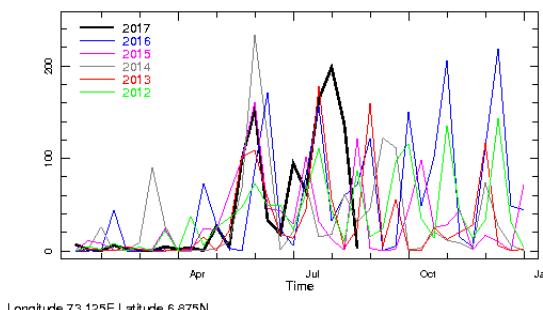

### Monthly Rainfall Monitoring

The figure shows the average observed rainfall in the previous month.

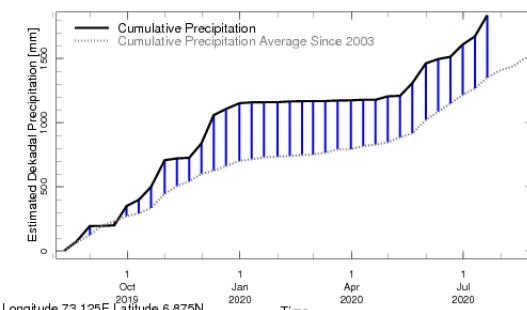

## Monthly and Seasonal Monitoring

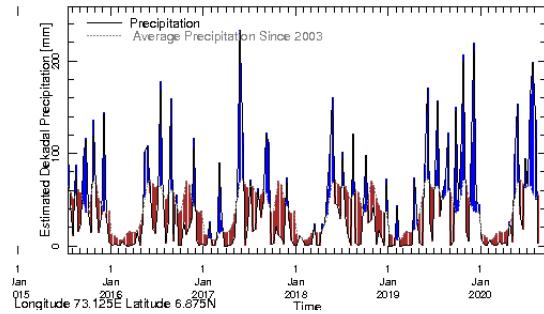

### Northern Maldives:

Longitude 73.125E Latitude 6.875N  
Rainfall in the current year (black) compared to rainfall in previous 5 years

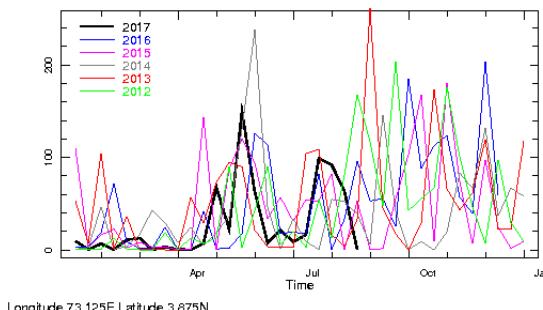

Longitude 73.125E Latitude 6.875N  
Rainfall of past 365 days (black) compared to average rainfall since 2003.

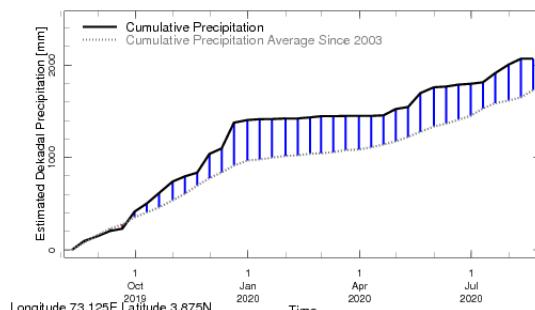

Longitude 73.125E Latitude 6.875N  
Rainfall in the past 5 years with above-average rainfall hatched in blue and below-average hatched in brown

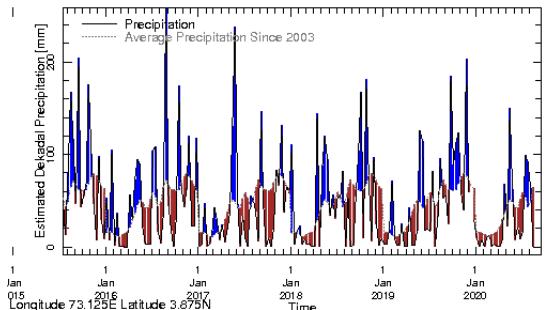

### Central Maldives:

Longitude 73.125E Latitude 3.875N  
Rainfall in the current year (black) compared to rainfall in previous 5 years

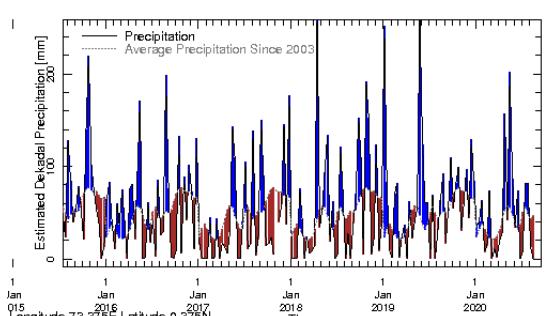

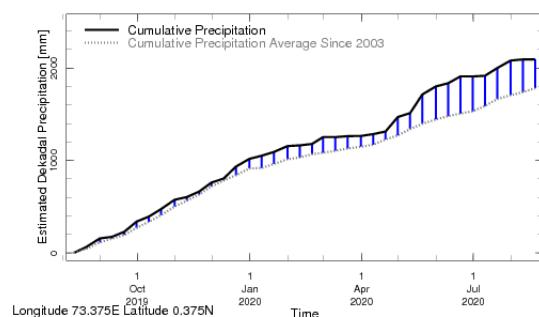

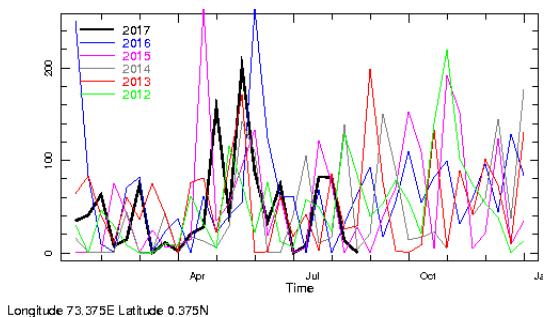

Longitude 73.125E Latitude 3.875N  
Rainfall of past 365 days (black) compared to average rainfall since 2003.

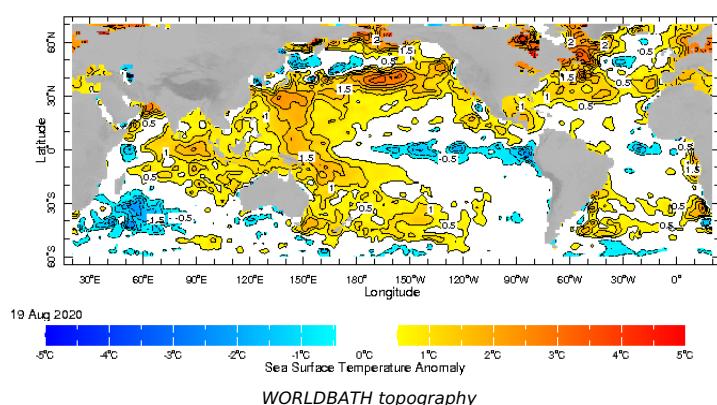

**Rainfall in the past 5 years with above-average rainfall  
hatched in blue and below-average hatched in brown**

### Southern Maldives:

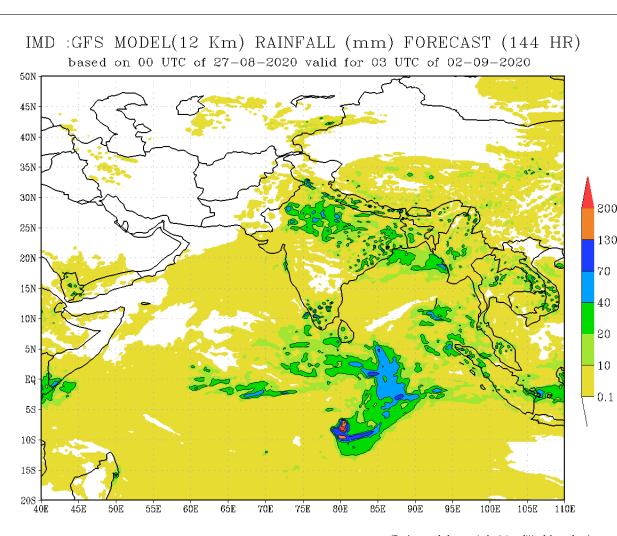

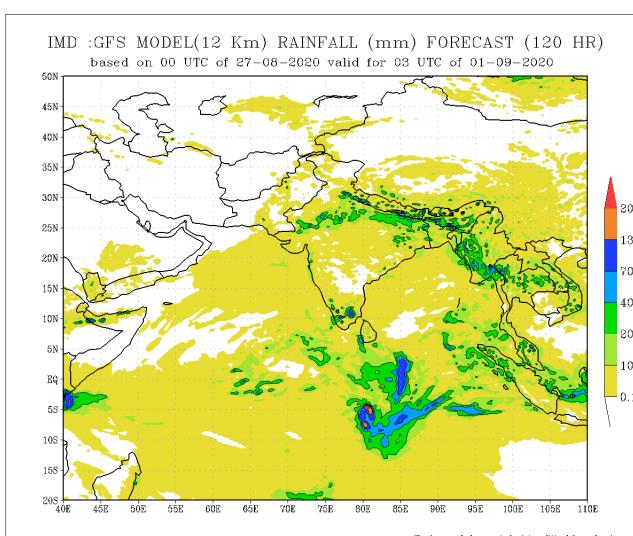

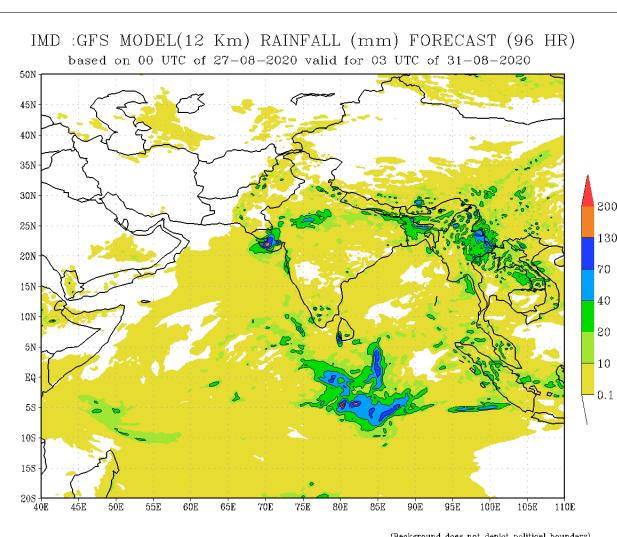

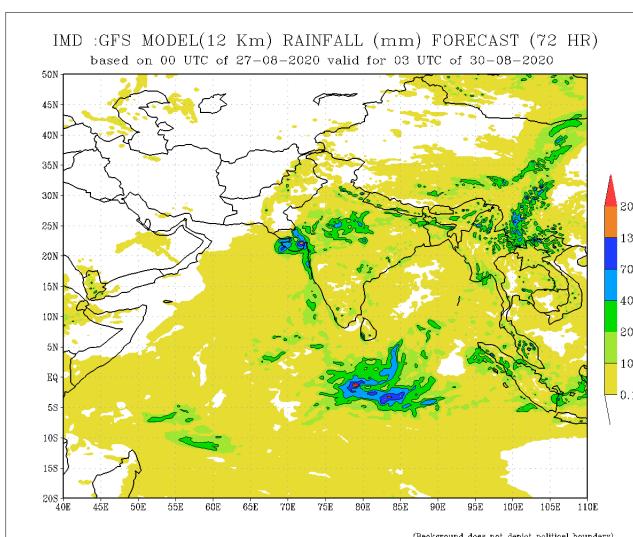

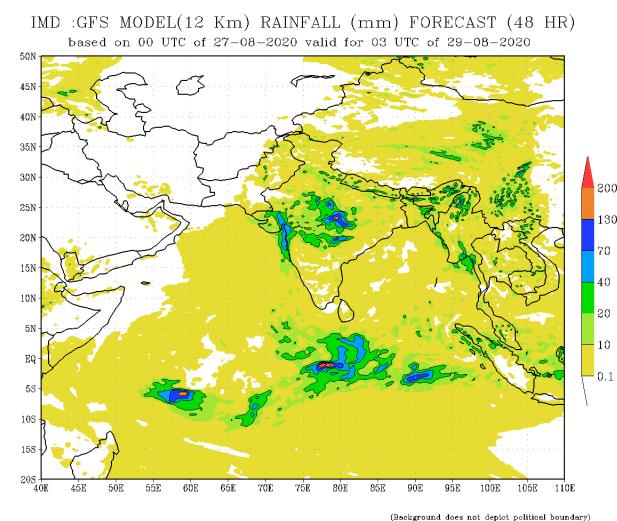

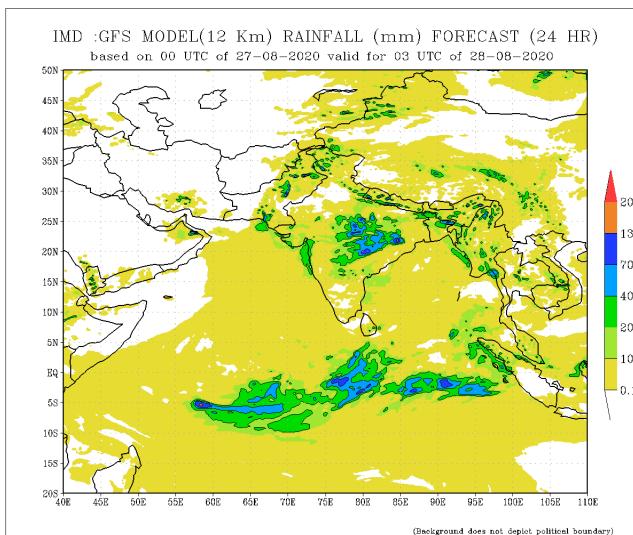

**Rainfall in the past 5 years with above-average rainfall  
hatched in blue and below-average hatched in brown**

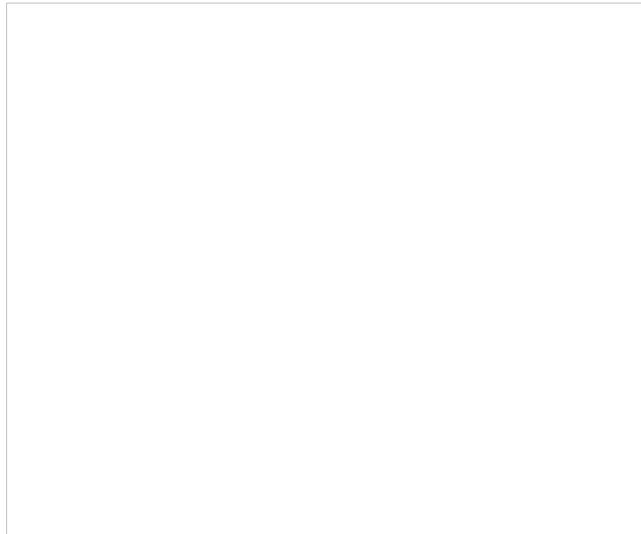

### Ocean Surface Monitoring

## Daily Rainfall Forecast

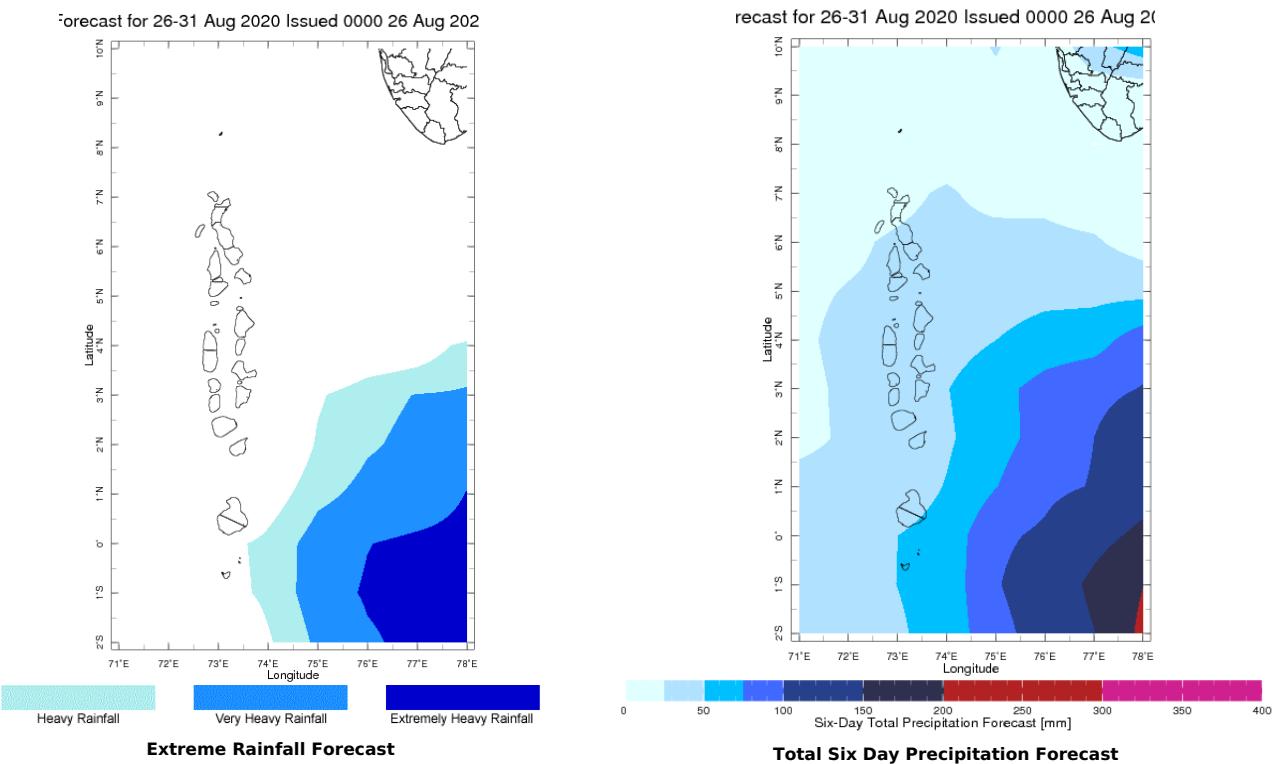

Daily Rainfall forecasts (up to 7 days ahead) from the IMD is provided in figures below. These predictions are from the GFS (T1534) model covering the entire south Asian region.

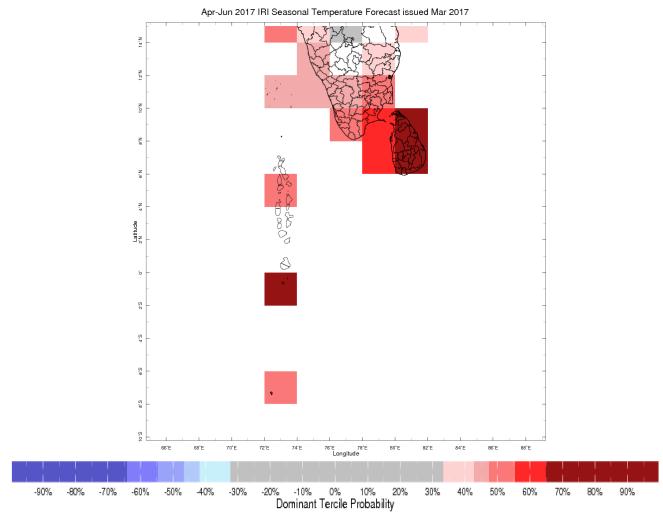

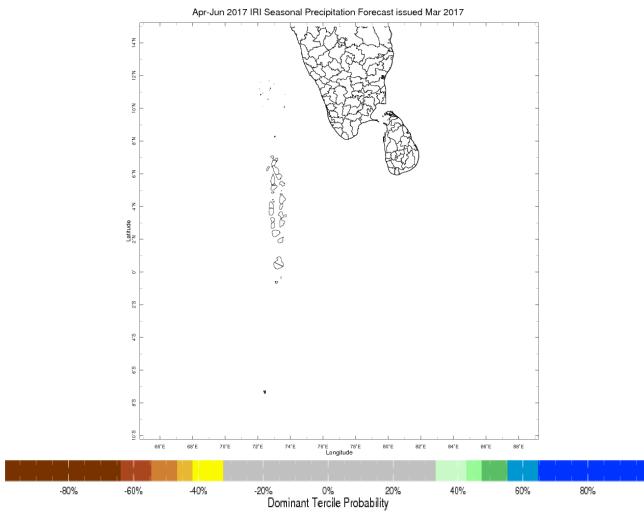

## Weekly Rainfall Forecast

Total rainfall forecast from the IRI for next six days is provided in figures below. The figure to the left shows the expectancy of heavy rainfall events during these six days while the figure to the right is the prediction of total rainfall amount during this period.

## Seasonal Rainfall and Temperature Forecast

Following is the latest seasonal precipitation and temperature prediction for the next 3 months by the IRI. The color shading indicates the probability of the most dominant tercile -- that is, the tercile having the highest forecast probability. The color bar alongside the map defines these dominant tercile probability levels. The upper side of the color bar shows the colors used for increasingly strong probabilities when the dominant tercile is the above-normal tercile, while the lower side shows likewise for the below-normal tercile. The gray color indicates an enhanced probability for the near-normal tercile (nearly always limited to 40%).
