

Daily Rainfall Monitoring

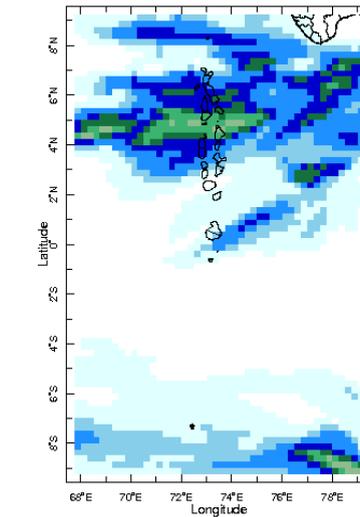

The following figures show the observed rainfall in the last 15 days in Maldives.

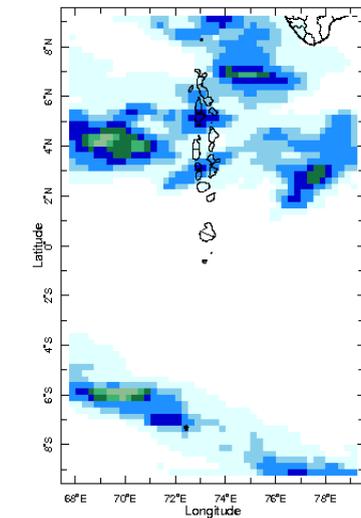

20 Sep 2020

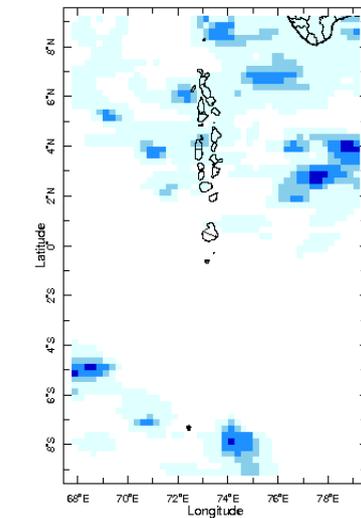

21 Sep 2020

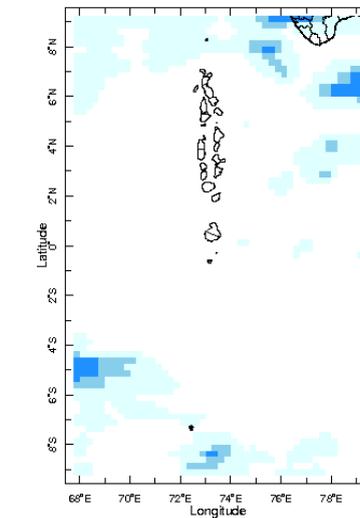

22 Sep 2020

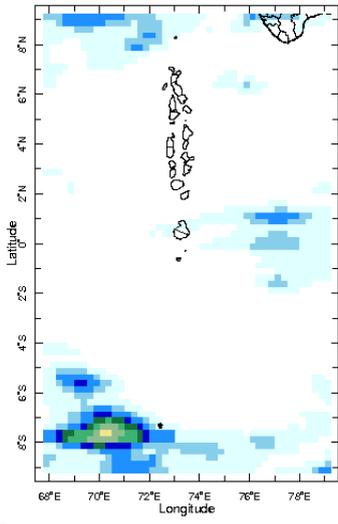

23 Sep 2020

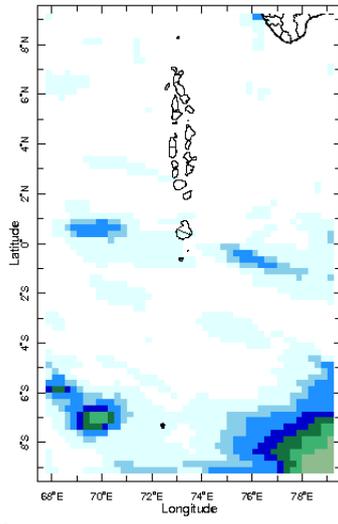

24 Sep 2020

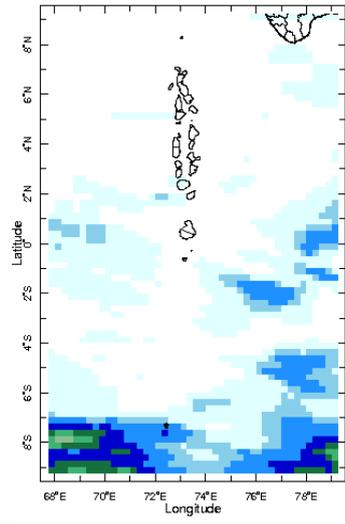

25 Sep 2020

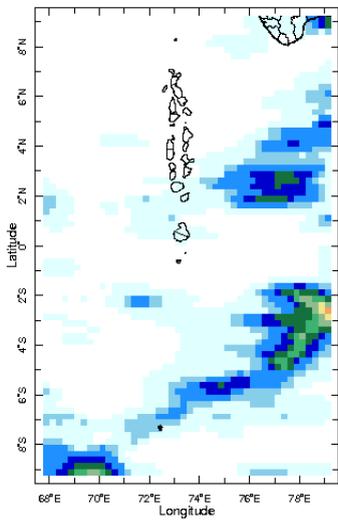

26 Sep 2020

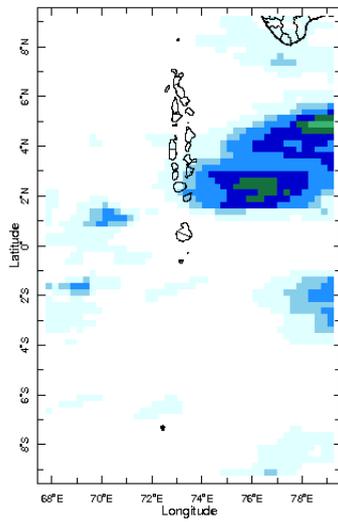

27 Sep 2020

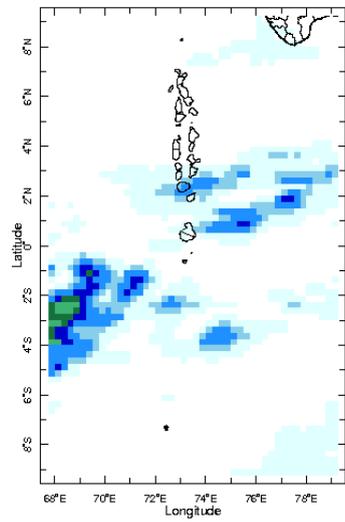

28 Sep 2020

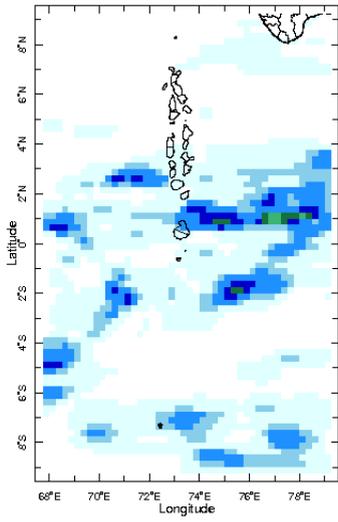

29 Sep 2020

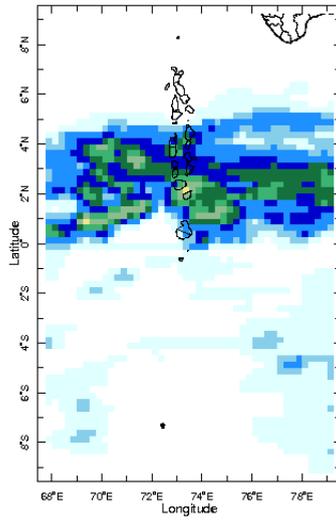

30 Sep 2020

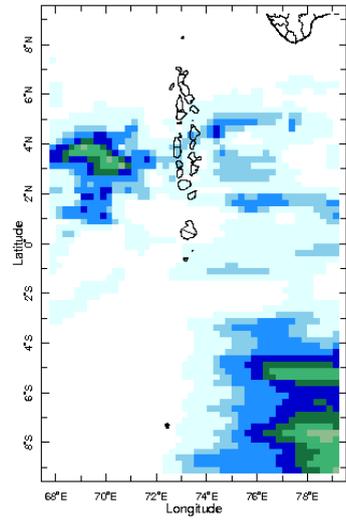

1 Oct 2020

2 Oct 2020

3 Oct 2020

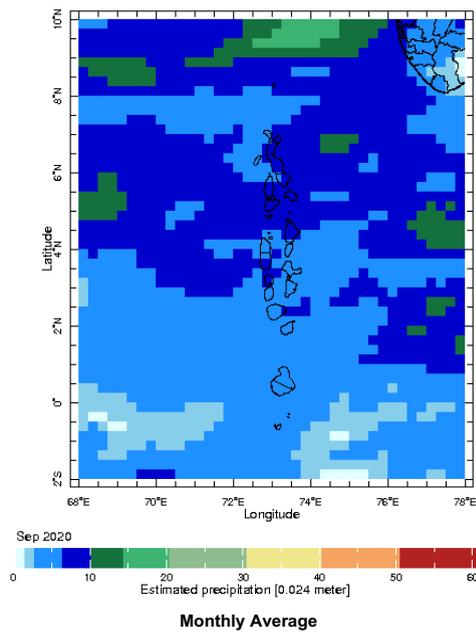

4 Oct 2020

Monthly Rainfall Monitoring

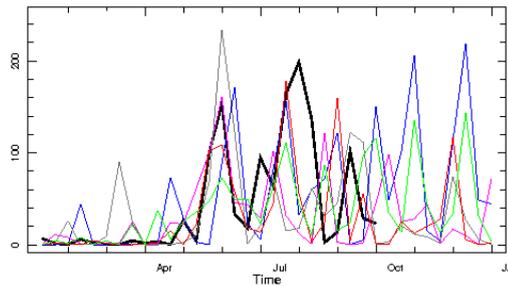

The figure shows the average observed rainfall in the previous month.

Monthly Average

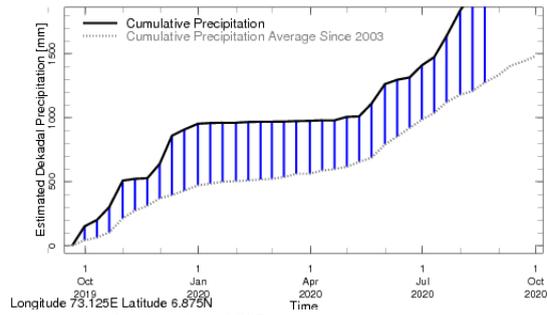

Monthly and Seasonal Monitoring

Northern Maldives:

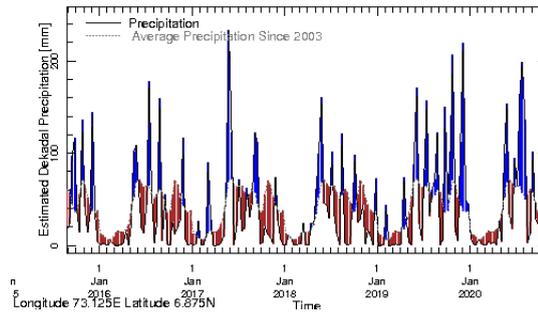

Longitude 73.125E Latitude 6.875N

Rainfall in the current year (black) compared to rainfall in previous 5 years

Longitude 73.125E Latitude 6.875N

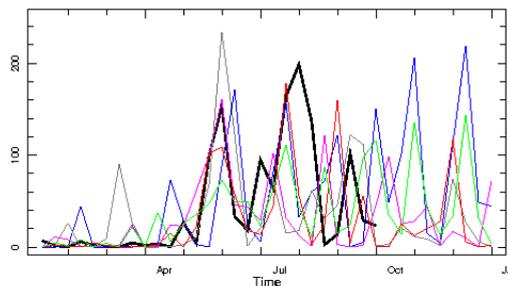

Rainfall of past 365 days (black) compared to average rainfall since 2003.

Longitude 73.125E Latitude 6.875N

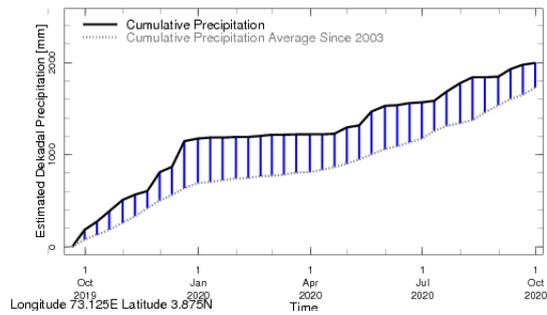

Rainfall in the past 5 years with above-average rainfall hatched in blue and below-average hatched in brown

Central Maldives:

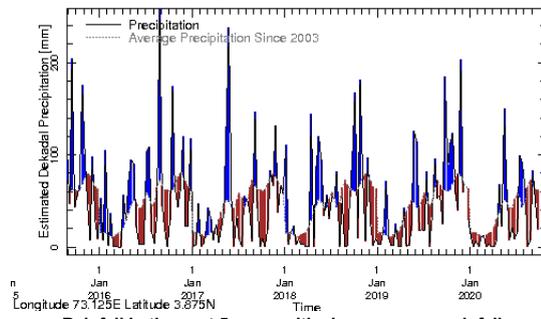

Longitude 73.125E Latitude 6.875N

Rainfall in the current year (black) compared to rainfall in previous 5 years

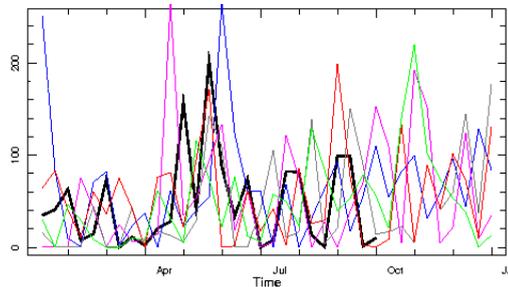

Longitude 73.125E Latitude 3.875N

Rainfall of past 365 days (black) compared to average rainfall since 2003.

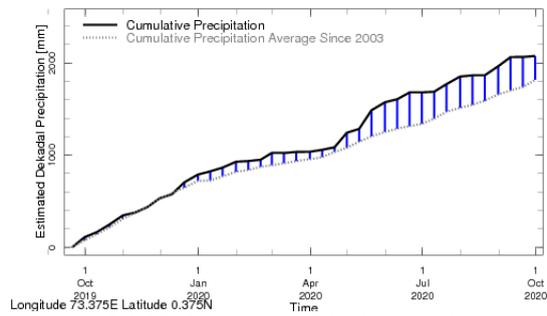

Rainfall in the past 5 years with above-average rainfall hatched in blue and below-average hatched in brown

Southern Maldives:

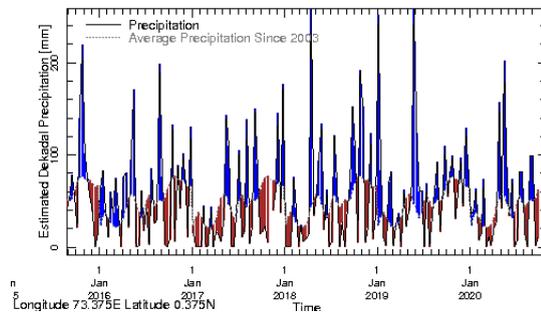

Longitude 73.375E Latitude 0.375N

Rainfall in the current year (black) compared to rainfall in previous 5 years

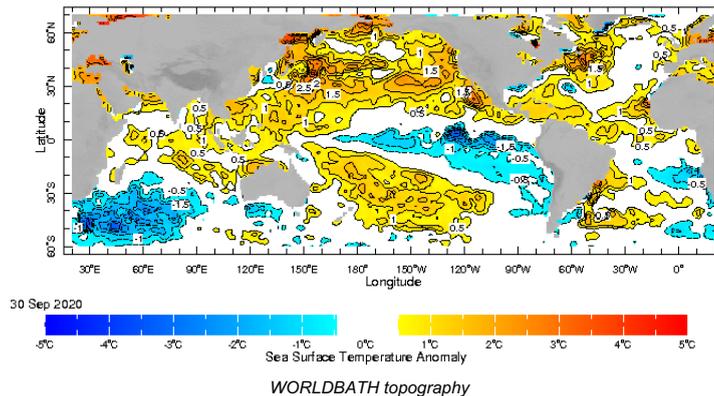

Longitude 73.375E Latitude 0.375N

Rainfall of past 365 days (black) compared to average rainfall since 2003.

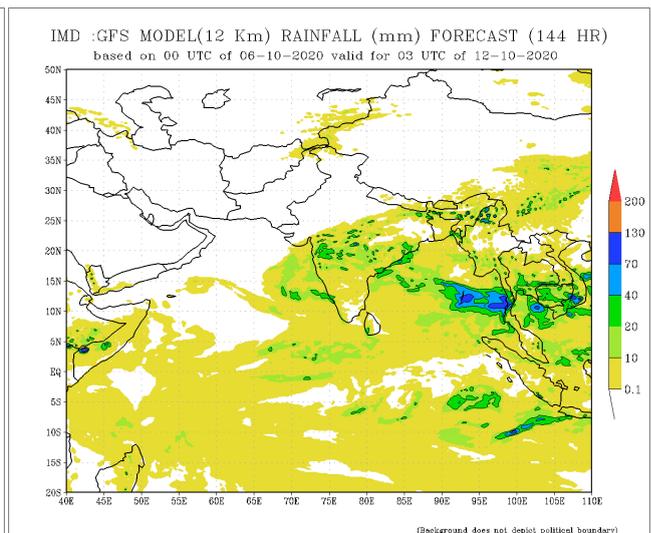

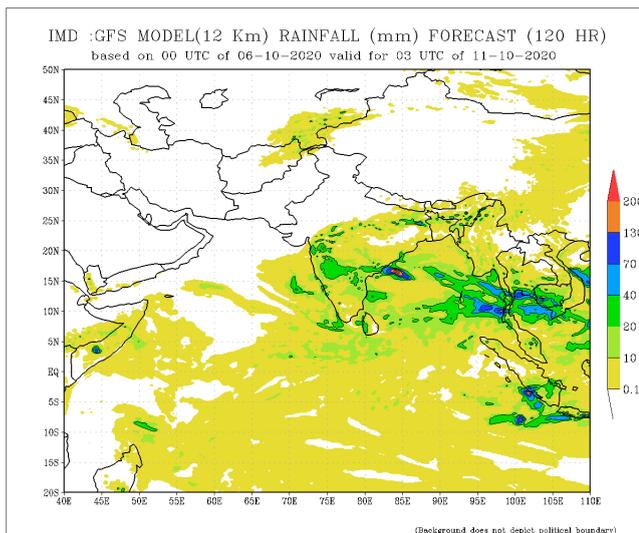

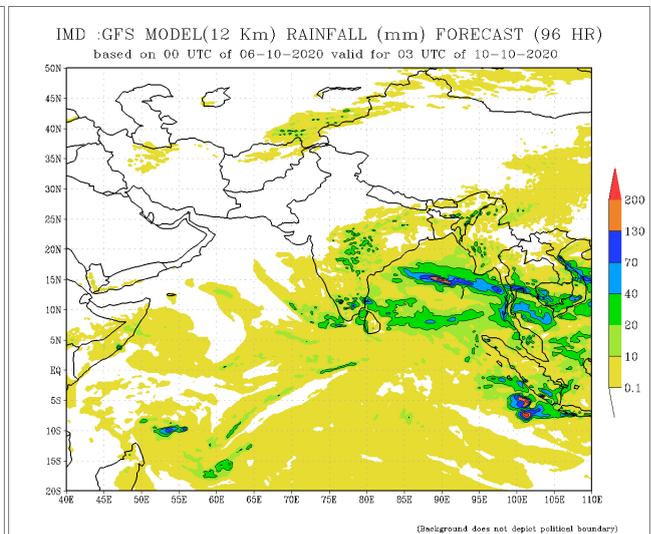

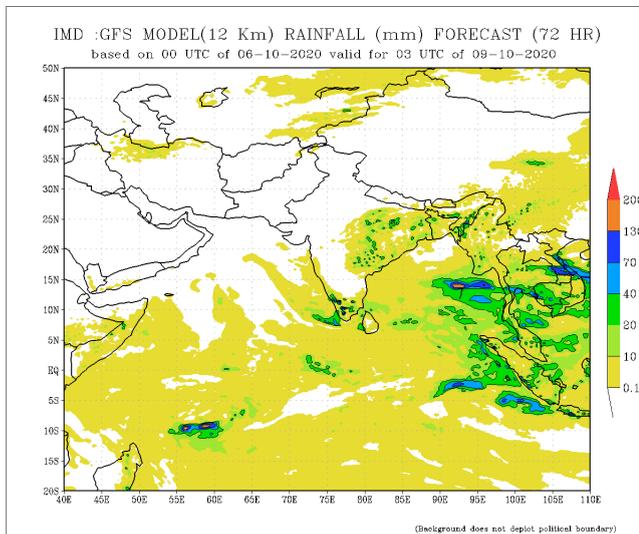

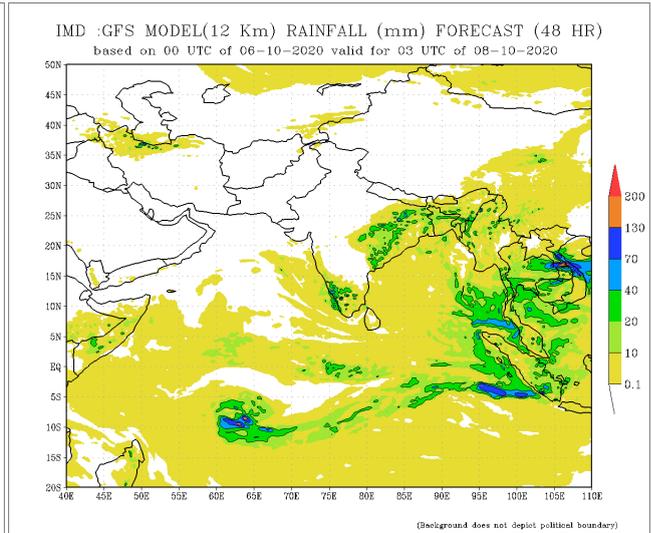

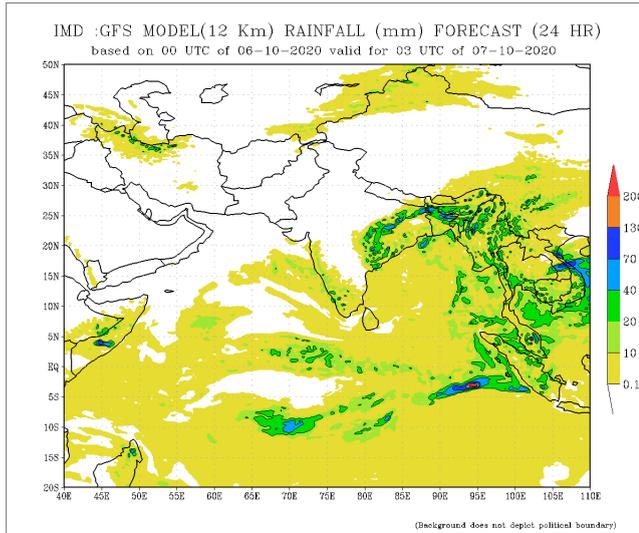

Rainfall in the past 5 years with above-average rainfall hatched in blue and below-average hatched in brown

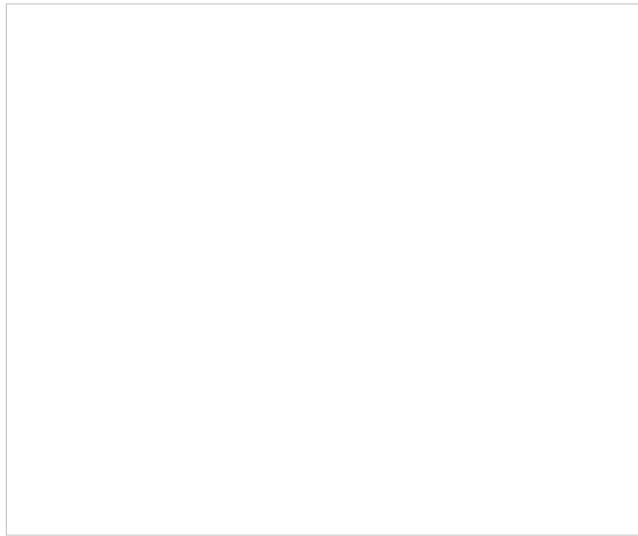

Ocean Surface Monitoring

Daily Rainfall Forecast

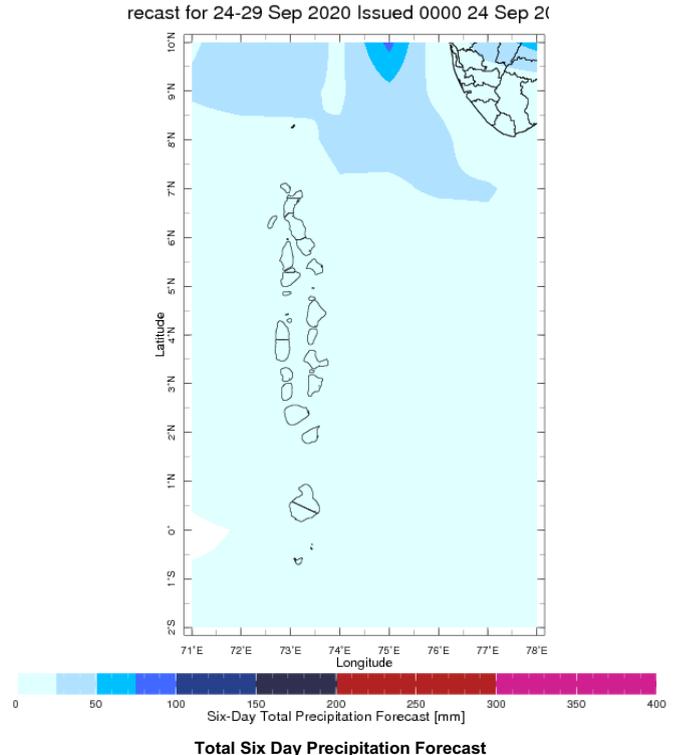

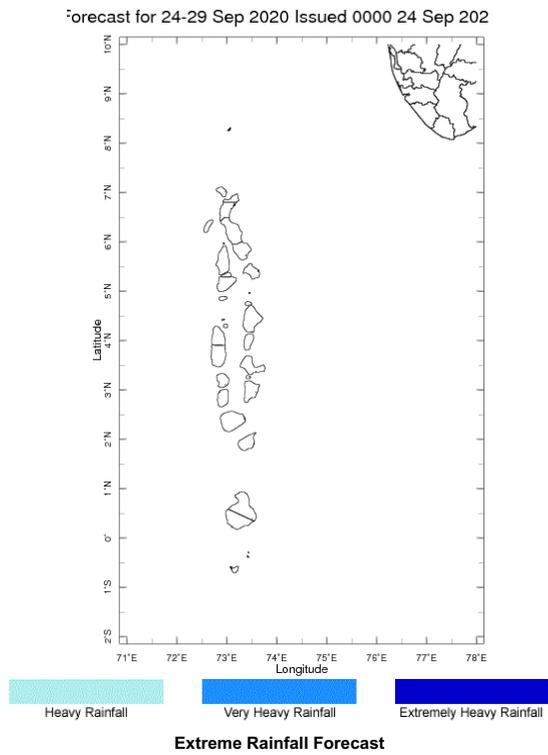

Daily Rainfall forecasts (up to 7 days ahead) from the IMD is provided in figures below. These predictions are from the GFS (T1534) model covering the entire south Asian region.

Weekly Rainfall Forecast

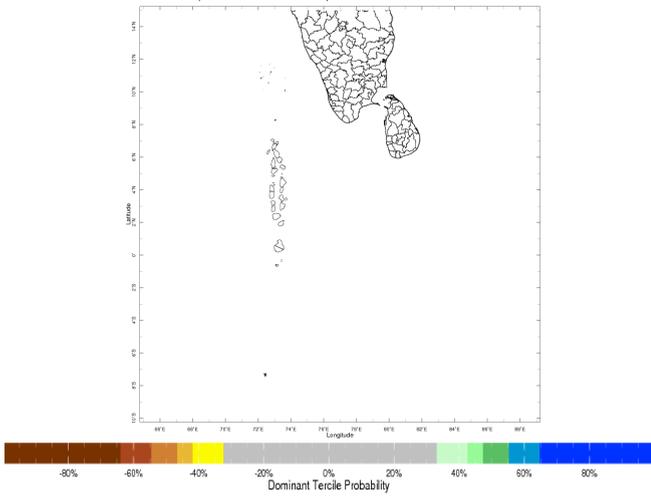

Total rainfall forecast from the IRI for next six days is provided in figures below. The figure to the left shows the expectancy of heavy rainfall events during these six days while the figure to the right is the prediction of total rainfall amount during this period.

Seasonal Rainfall and Temperature Forecast

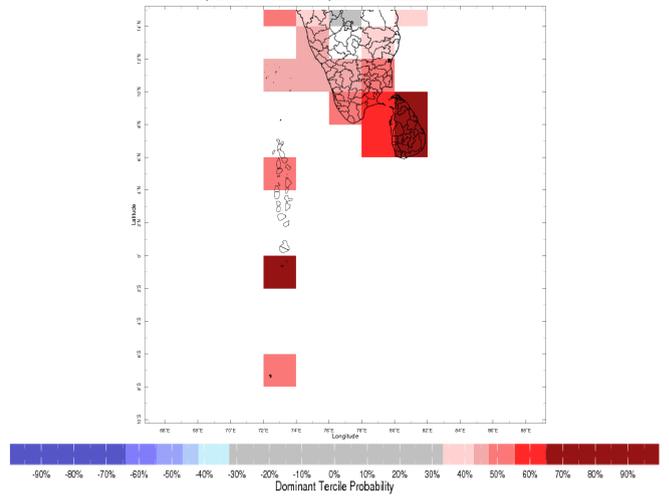

Following is the latest seasonal precipitation and temperature prediction for the next 3 months by the IRI. The color shading indicates the probability of the most dominant tercile -- that is, the tercile having the highest forecast probability. The color bar alongside the map defines these dominant tercile probability levels. The upper side of the color bar shows the colors used for increasingly strong probabilities when the dominant tercile is the above-normal tercile, while the lower side shows likewise for the below-normal tercile. The gray color indicates an enhanced probability for the near-normal tercile (nearly always limited to 40%).
